# Spydy works as a Secret Agent

His job is to collect and deliver information from and to different public organizations

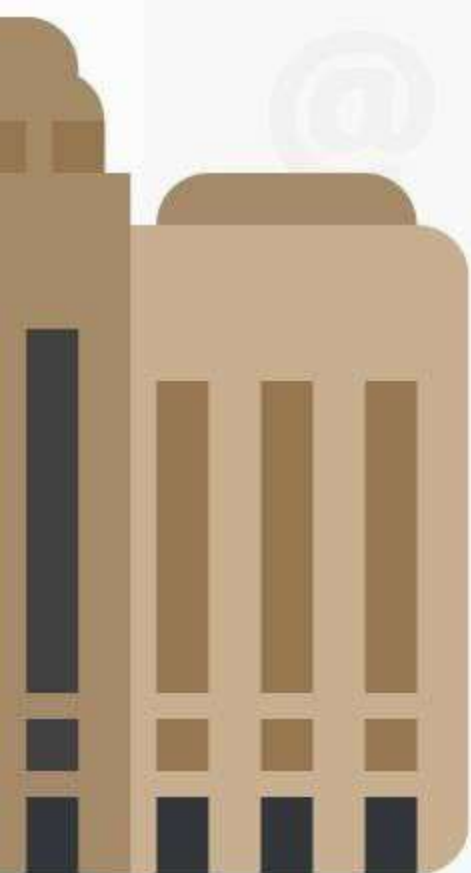

But little did he know about the gangsters who are waiting to get their hands on the **information**

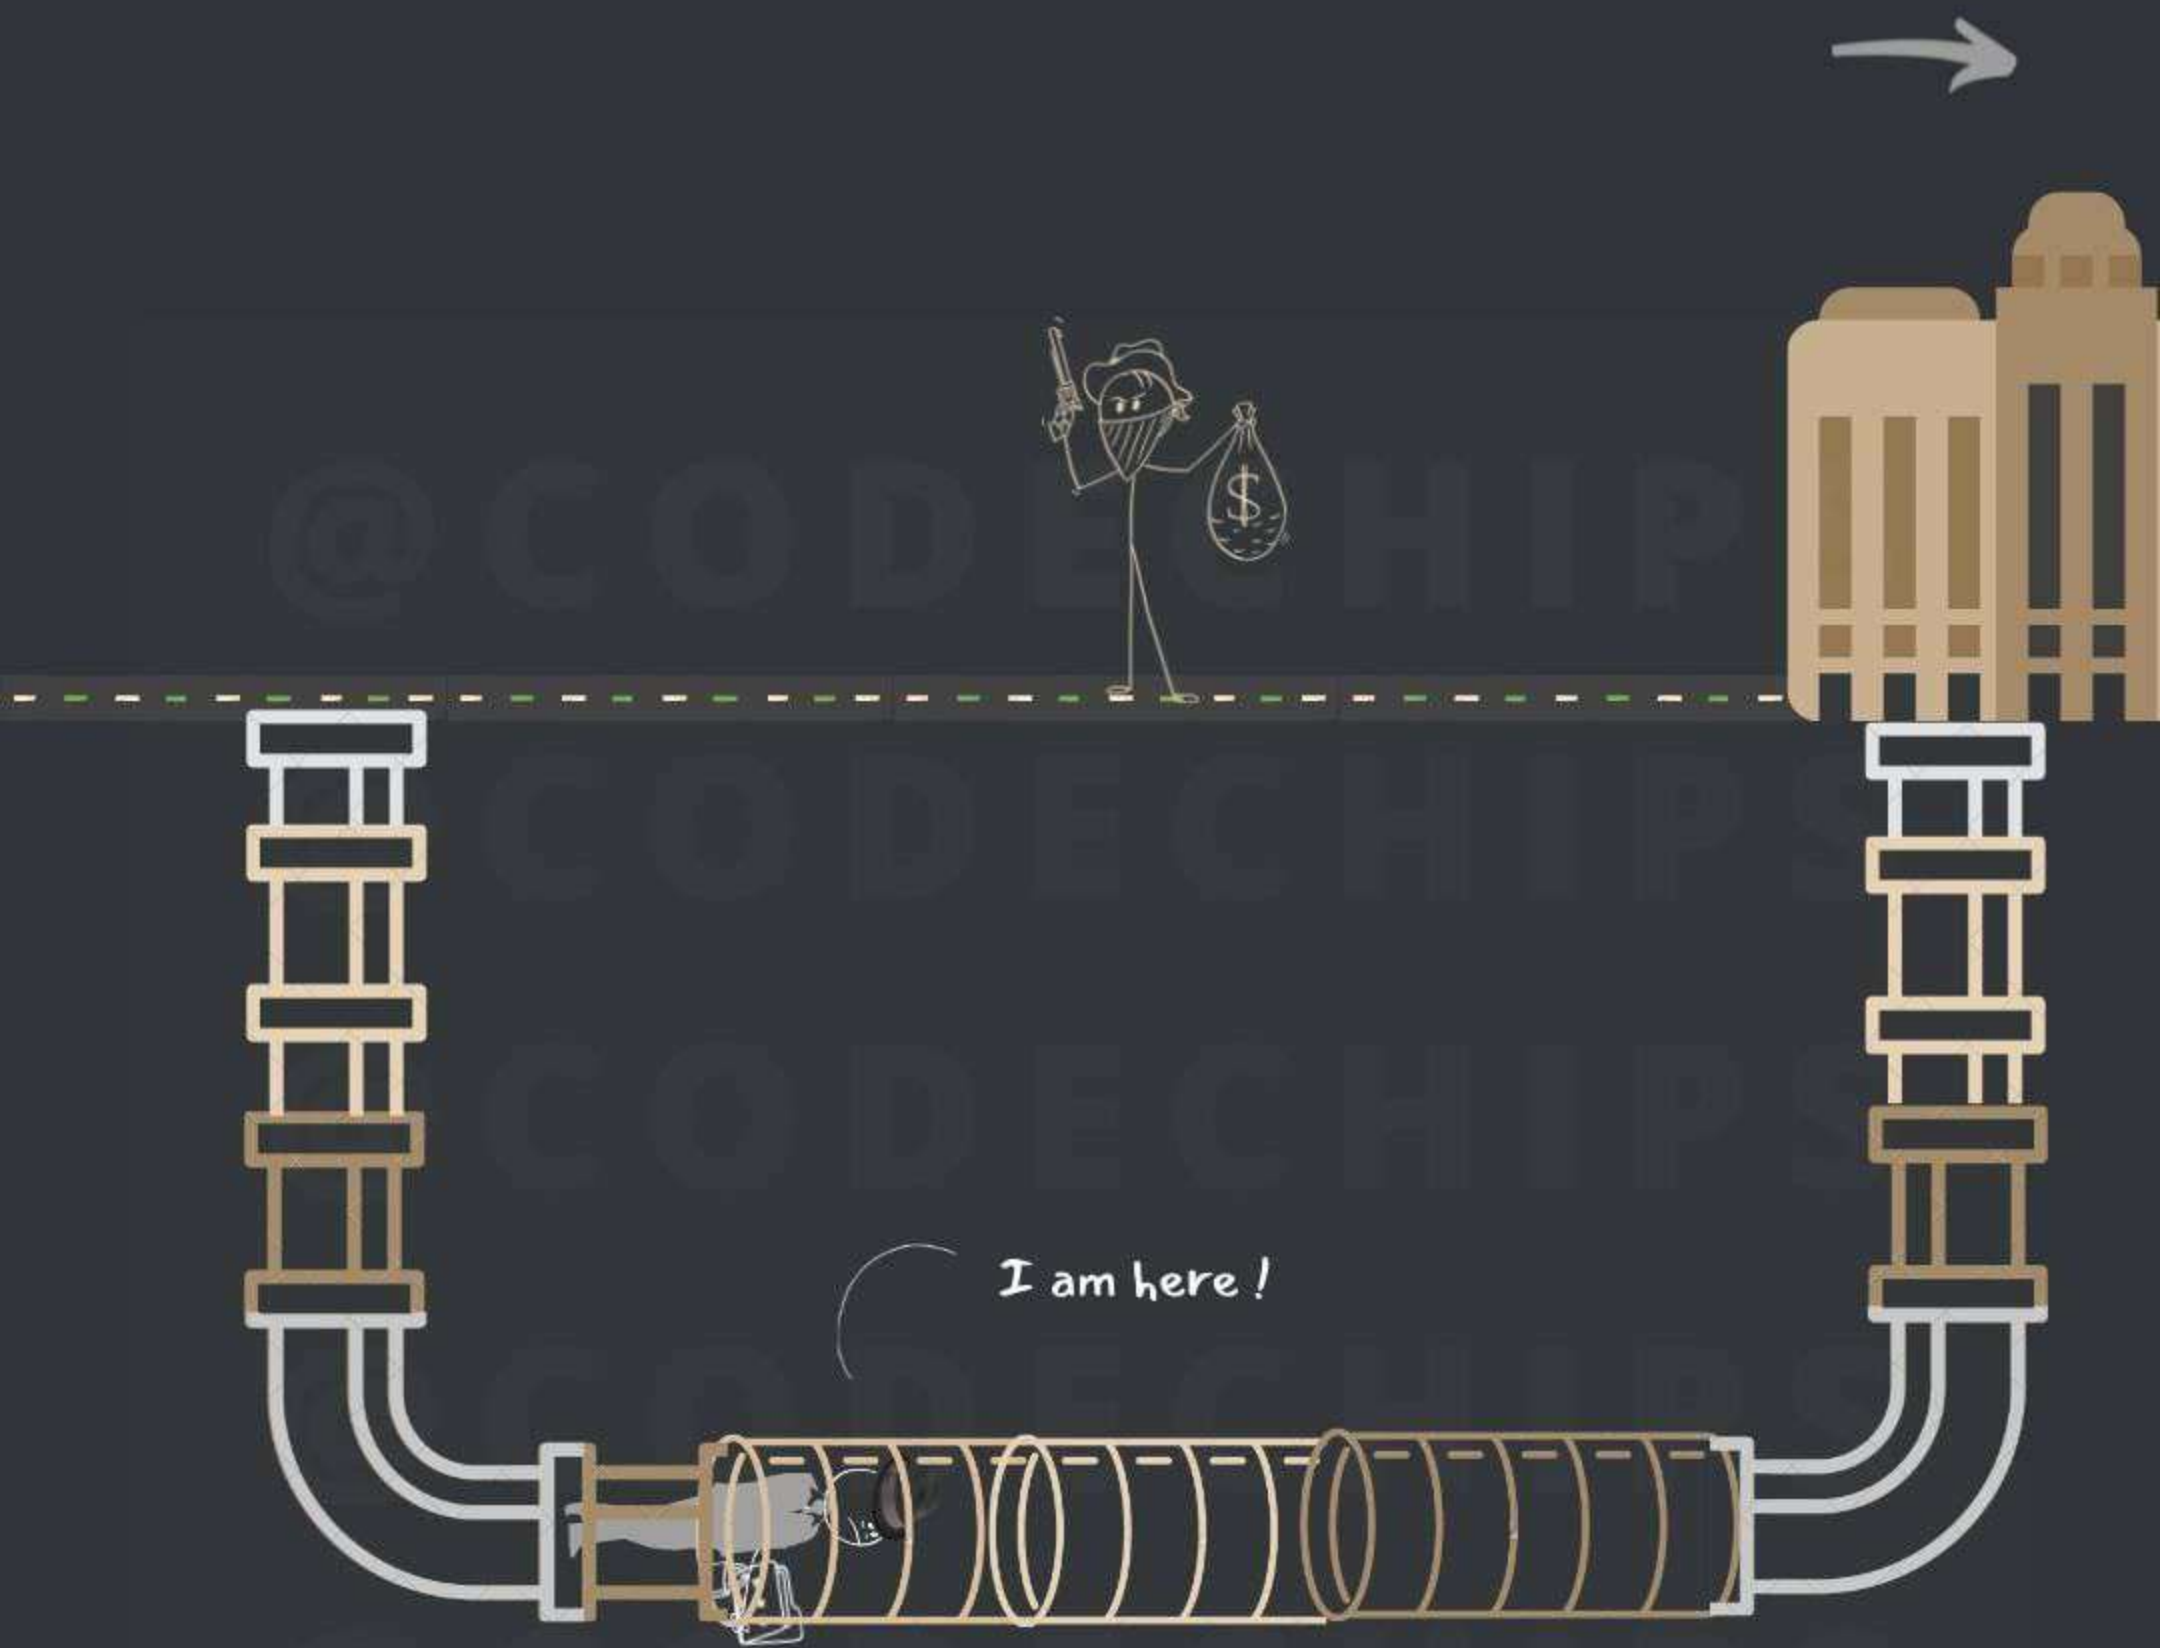

So Spydy joins a Secret Agent Service  
who could help him

They offered their  
Secret Agent Uniform  
& made him anonymous

They helped him to  
encrypt all the data

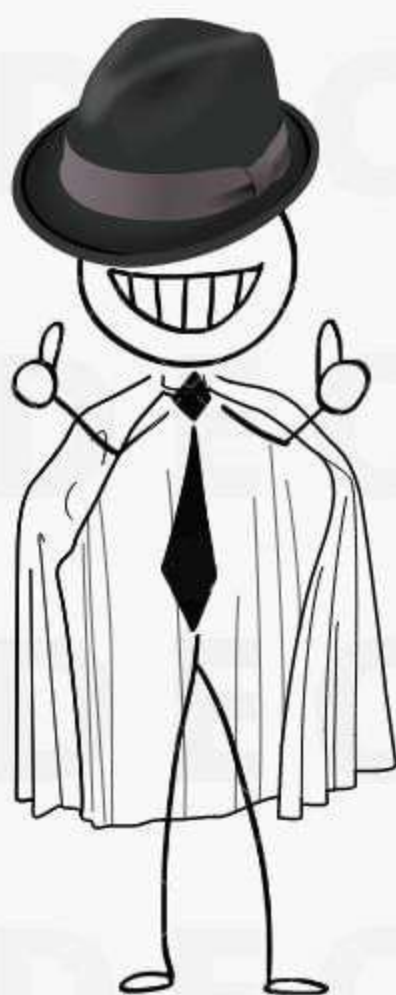

They also provide a Secret Underground Private Tunnel to reach your destinations

In this way you can proceed your work  
privately

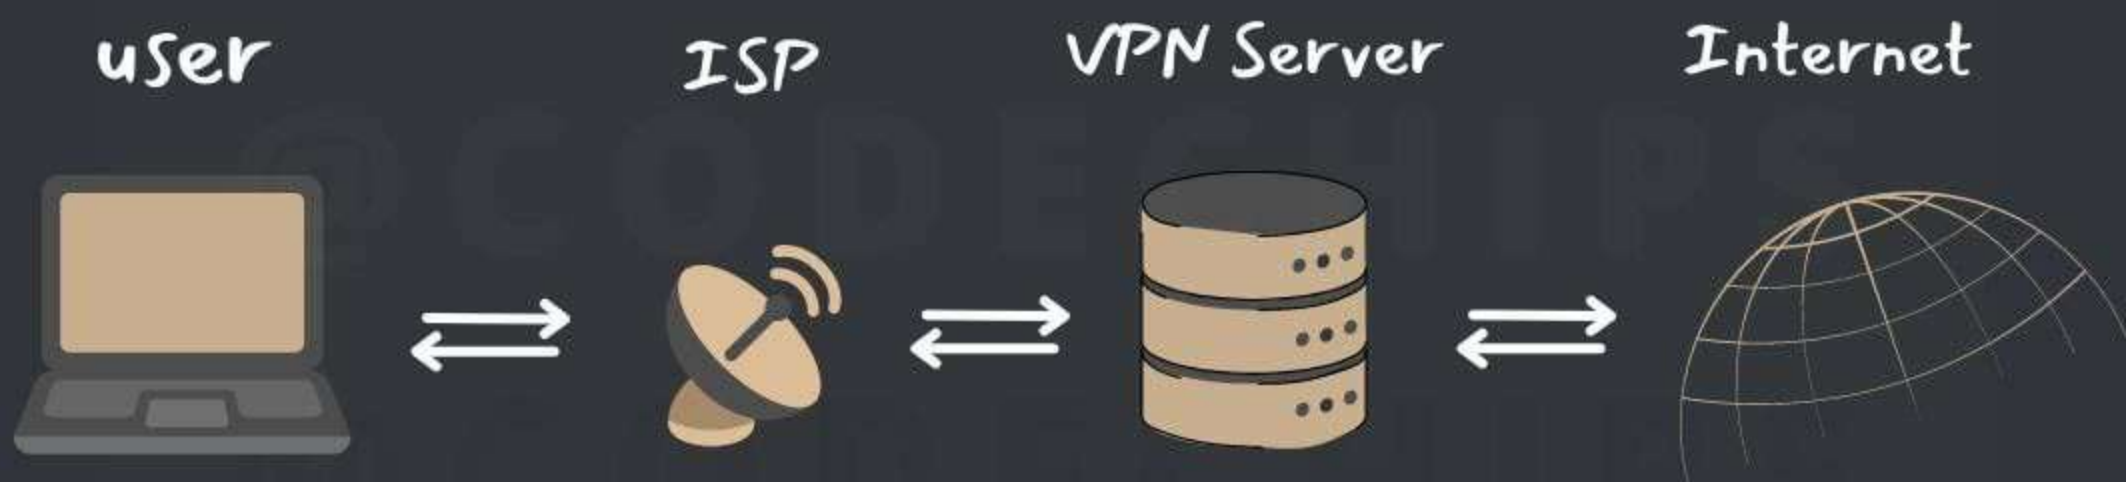

## What is a VPN ?

The Secret Agency Service is the same as VPN does in the Internet World

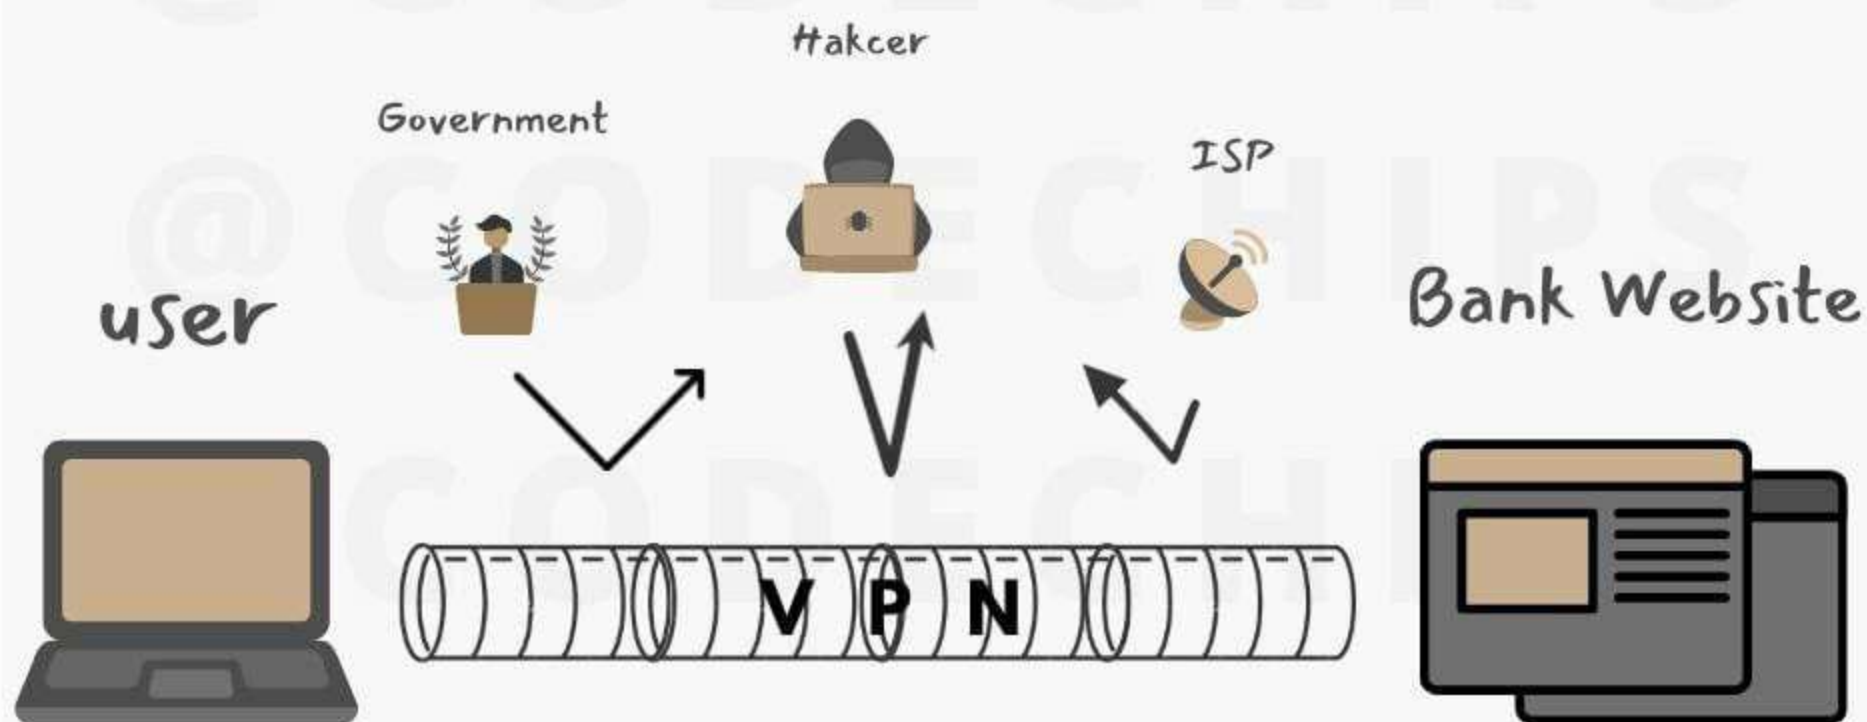

**Virtual Private Network** , provides users a private virtual network that can connect to the internet in a way that is safe and secure

## How a VPN works ?

VPN routes device's internet connection through VPN's private server rather than your ISP. The VPN acts as an intermediary thereby hiding your IP address

A VPN creates a private “tunnel” hides your vital data through encryption, making your data unreadable until it reaches its final destination

# Advantages of using a VPN

Stay anonymous

Online banking  
security

Prevent ISP  
tracking

Prevent price  
discrimination

Avoid censorship

Secure public Wi-Fi  
connections

Stream regionally blocked  
websites and content
